Sachin Ganpule

AI & Automation Engineer | Researching Multi Agent Systems |
Junior Consultant @ WonderBotz | MADS @ UMich | prev AI @
Volvo Cars & Hawl Technologies
Edison, New Jersey, United States

Summary

I build production AI systems, conduct multi-agent research, and architect reliable automation pipelines — bridging the gap between research breakthroughs and production-grade engineering. With a B.S. in Electrical & Computer Engineering from Rutgers and an ongoing Master of Applied Data Science (AI concentration) at the University of Michigan, I focus on turning complex, non-deterministic models into high-performing, measurable software. What I'm working on: Enterprise AI & Automation: Designing and deploying end-to-end agentic workflows, custom LLM solutions, and intelligent automation pipelines as an AI SWE Consultant at WonderBotz. Applied Research: Investigating latent-space inter-agent delegation and observability within recursive coding agent harnesses. Past Impact: Engineered enterprise hybrid RAG pipelines, predictive time-series models, and semantic caching optimizations at Volvo Cars and Hawl Technologies.

Experience

WonderBotz

Junior Consultant

August 2026 - Present (2 months)

Princeton, NJ

Agentic AI & Automation Engineering

Volvo Car USA

Artificial Intelligence Intern

June 2026 - July 2026 (2 months)

Mahwah, NJ

- Designed and built a PoC for a hybrid RAG pipeline (Azure AI Search) to replace the retailer portal search, achieving 95% recall@1 and preserving Salesforce-driven permission scoping across webpages, PDFs, Excel, and images.

- Engineered sales forecasting pipeline using PCA & K-Means clustering to segment volatile monthly demand, followed by SARIMAX feature selection and XGBoost modeling to predict sales target attainment by day 10 of the month, giving leadership an early signal beyond end-of-month projections.
- Translating technical tradeoffs and delivering clear recommendations to both engineering and non-technical stakeholders.

Hawl Technologies, LLC

AI Engineering Intern

January 2026 - May 2026 (5 months)

- Built Google Drive MCP integration with OAuth to support content extraction from docs, sheets, slides, PDFs, and text files.
- Extended AI memory Chrome extension to support ChatGLM: end-to-end scraper, event handshake, and docs so users can capture ChatGLM conversations in a unified memory store.
- Constructed a highly scalable, server-side vector search pipeline (Python, pgvector) using HNSW indexing to replace legacy TF-IDF, improving recall@5 by 40% and increasing query success rate to 70%.
- Improved backend LLM memory infrastructure by developing a batched embedding API (8x throughput increase) and migrating rate limiting to Redis, reducing 500-memory backfill time from 8+ minutes to ~1 minute.

Extern

Webacy Data Analytics Extern

August 2024 - September 2024 (2 months)

Performed data validation, correlation analysis, and k-means clustering using Python to profile risks and identify vulnerability patterns for nearly 1000 smart contracts against forty risk tags.

Leveraged SQL, Excel, and Tableau to conduct complex data manipulation and visualization, presenting actionable insights to drive future decision-making.

Rutgers IEEE

Micromouse Team Member

September 2023 - September 2024 (1 year 1 month)

Piscataway, New Jersey, United States

Collaborated with a large team that created a miniature robotic 'mouse' to navigate a maze autonomously in 65 seconds.

Implemented Floodfill maze-solving algorithm and integrated components using Arduino software.

Achieved 1st place at the 2023 IEEE MIT Micromouse Competition and 2024 IEEE NYIT Micromouse Competition.

Richmond Physical Therapy

Physical Therapy Aide

June 2023 - August 2023 (3 months)

Matawan, New Jersey, United States

Assisted therapists in treating 15–30 patients daily while keeping sessions running smoothly.

Reduced patient wait times to 1–2 minutes during double-booked periods.

Prepared equipment and turned treatment rooms over within minutes between appointments.

Scheduled patient visits and updated files to support therapist workflow.

Built strong rapport with young athletes, elderly patients, and post-surgery patients.

Education

University of Michigan

Master's degree, Applied Data Science · (January 2026)

Rutgers University–New Brunswick

Bachelor of Science - BS, Electrical and Computer engineering · (September 2021 - May 2025)
